WELCOME TO DAILYDOER

TRACK, BUILD AND MAINTAIN DAILY HABITS EFFORTLESSLY.

INTRODUCTION

Description

▶ **In order to load data in the habit tracker app, we use JSON file or cloud storage to store data.**

▶ **This app is implemented by using Python Programming language.**

▶ **It allows users to users to add, view , update and delete habits that are no longer needed.**

▶ **We use Pycharm to run the code or test the code for app development and identify any errors soon.**

▶ **This app helps you take control of your routine one at a time.**

LETS GET STARTED!

Habit Class Structure

```python
import json

class Habit:
    def __init__(self, name):
        self.name = name
        self.streak = 0
        self.last_done = None

    def mark_as_done(self):
        if self.last_done == str(datetime.date.today()):
            print("You've already marked this habit as done today!")
```
